HDTV: HD Equipment

HDTV is the ultimate home-viewing experience. You get a wider screen, impeccable picture quality, and the very best in sound.

Now it's easy to see the TV you love in High Definition, with Bright House Networks HDTV.

To get HDTV from Bright House Networks, you only need 2 things:

1. HDTV set
2. HDTV cable box

HDTV Set

HDTV programs cannot be displayed on a standard TV, so you need an HD-capable TV set.

Many different types of HD-monitors are available:

- Super-thin, top-of-the-line, plasma screens
- Large, front or rear projection TVs
- Smaller, more affordable sets

All of these options can deliver unbelievable picture and sound quality. There are many choices to fit your budget and viewing preference.

You may see two types of picture display on your HDTV set:

Widescreen (16:9)

Most HDTV sets come in a "widescreen" picture size. This widescreen format is often called "sixteen by nine (16:9)" to refer to its wider than standard TV, giving you a fuller picture and true cinematic experience.

Standard TV (4:3)

All TV programming is not yet offered in HD. HDTV sets can show regular programming in the nearly square standard format - sometimes called "four by three (4:3)." This means you can switch back and forth between widescreen and standard displays on the same set.

HD Cable Box

The second thing you need in order to watch HD programming is an HD cable box.

Bright House Networks will upgrade your current digital cable box to HD quickly and easily. Just **call your local Customer Service** to set up installation.

With HD from Bright House Networks, you never have to buy and install expensive, bulky rooftop satellite equipment. Once your HD cable box is installed, you're ready to go - the HD tuner is built right in!

Optional Equipment

There is some additional, optional equipment you can get to enhance your HD viewing experience. This equipment is not essential to watch HDTV, but can give you an even better audio experience.

HDTV offers amazing, CD-quality sound. Most HDTV programming is available in Dolby Digital 5.1 Surround Sound, the ultimate in sound quality.

This means you can enhance your viewing experience even more if you have a surround sound system that includes the following:

1. A/V Receiver with a Dolby Digital decoder
2. Separate speakers
3. Sub-woofer

Remember: This equipment is optional. You don't need it to watch programs in HD.
